Near Record Corn Crop Predicted Revised Kan. crop estimates predict fall bounty

Newly revised estimates are predicting the second largest Kansas corn crop on record.

Kansas Agricultural Statistics Service has lowered its corn forecast by 1 percent from a month ago but still predicts a bountiful crop of 580.5 million bushels. That would be 3 percent below last year's record harvest.

Tuesday's report forecasts total soybean production in Kansas at 136 million bushels. That's down 6 percent from last month's estimate would be still be the second highest on record.

The sorghum forecast remained unchanged at 171.6 million bushels.
